
DIALOGUES IN RESEARCH ETHICS

Dialogue 1 New Research and Old Ethics

Dr. Eric M. Meslin, University of Toronto

2 p.m. Friday, Oct. 15, 1993, RMSB 3109

→Refreshments will be provided←

The current paradigm for evaluating ethical acceptability of human subject research is based on principles proposed in 1978 by the U.S. National Commission for the Protection of Human Subjects. These principles work well enough when evaluating randomized clinical trials. But new types of research, including epidemiologic, health services and even genomic studies, might be different enough from the RCT to warrant a different approach.

Eric M. Meslin, Ph.D., is assistant director of the University of Toronto's Center for Bioethics and associate director of the Clinical Ethics Center at Sunnybrook Health Science Center.

Dr. Meslin's visit is made possible by the cooperation of the Canadian American Business Alliance, organizer of the annual South Florida International Health Care Conference.

Dialogues in Research Ethics is a series of monthly conferences sponsored by the University of Miami Forum for Medical Ethics and Philosophy, the South Florida Veterans Affairs Foundation for Research and Education, Inc., the Research Service of the Miami VA Medical Center, the UM Department of Microbiology and Immunology, and the Office of the Deputy Dean for Research and Graduate Studies. For more information about the series, phone 547-5723, write to medical campus box M-825 or send e-mail to kgoodman@newssun.med.miami.edu.
